- Find the volume of a solid of revolution using the washer method.
- Find the volume of a solid with known cross sections.
- Find the volume of a solid of revolution using the shell method.
- Find the arc length of a smooth curve.
- Find the area of a surface of revolution.
- Find the work done by a constant force.
- Find the work done by a variable force.

**Analysis**

- Compare the uses of the disk method and the shell method.

**Synthesis**

**Evaluation**

	<p>FUN-7.A.1 Differential equations relate a function of an independent variable and the function's derivatives.</p> <p><b>TOPIC 7.2 Verifying Solutions for Differential Equations</b>  <b>FUN-7 Solving differential equations allows us to determine functions and develop models.</b></p> <p>FUN-7.B Verify solutions to differential equations.</p> <p>FUN-7.B.1 Derivatives can be used to verify that a function is a solution to a given differential equation.</p> <p>FUN-7.B.2 There may be infinitely many general solutions to a differential equation.</p> <p><b>TOPIC 7.3 Sketching Slope Fields</b>  <b>FUN-7 Solving differential equations allows us to determine functions and develop models.</b></p> <p>FUN-7.C Estimate solutions to differential equations.</p> <p>FUN-7.C.1 A slope field is a graphical representation of a differential equation on a finite set of points in the plane.</p> <p>FUN-7.C.2 Slope fields provide information about the behavior of solutions to first-order differential equations.</p>	<p><a href="#">and the Logistic Equation.pptx</a>  <a href="#">06.04 First-Order Linear Differential Equations.pptx</a></p>	<p><b>Analysis</b></p> <p><b>Synthesis</b></p> <p><b>Evaluation</b></p> <p>Students will evaluate incorrect work for errors.</p>
--	--	---	--

**TOPIC 7.4 Reasoning Using Slope Fields**  
**FUN-7 Solving differential equations allows us to determine functions and develop models.**

FUN-7.C Estimate solutions to differential equations.

FUN-7.C.3 Solutions to differential equations are functions or families of functions.

**TOPIC 7.5 Approximating Solutions Using Euler's Method BC only**  
**FUN-7 Solving differential equations allows us to determine functions and develop models.**

FUN-7.C Estimate solutions to differential equations.

FUN-7.C.4 Euler's method provides a procedure for approximating a solution to a differential equation or a point on a solution curve. BC only

**TOPIC 7.6 Finding General Solutions Using Separation of Variables**  
**FUN-7 Solving differential equations allows us to determine functions and develop models.**

FUN-7.D Determine general solutions to differential equations.

FUN-7.D.1 Some differential equations can be solved by separation of variables.

FUN-7.D.2 Antidifferentiation can be used to find general solutions to differential equations.

**TOPIC 7.7 Finding Particular Solutions Using Initial Conditions and Separation of Variables**  
**FUN-7 Solving differential equations allows us to determine functions and develop models.**

FUN-7.E Determine particular solutions to differential equations.

FUN-7.E.1 A general solution may describe infinitely many solutions to a differential equation. There is only one particular solution passing through a given point.

FUN-7.E.2 The function  $F$  defined by

$F(x) = y_0 + \int_a^x f(t)dt$  is a particular solution to the differential equation  $\frac{dy}{dx} = f(x)$ , satisfying  $F(a) = y_0$ .

**TOPIC 7.8 Exponential Models with Differential Equations**  
**FUN-7 Solving differential equations allows us to determine functions and develop models.**

FUN-7.F Interpret the meaning of a differential equation and its variables in context.

FUN-7.G Determine general and particular solutions for problems involving differential equations in context.

FUN-7.F.1 Specific applications of finding general and particular solutions to differential equations include motion along a line and exponential growth and decay.

FUN-7.F.2 The model for exponential growth and decay that arises from the statement “The rate of change of a quantity is proportional to the size of the quantity” is  $\frac{dy}{dt} = ky$ .

FUN-7.G.1 The exponential growth and decay model,  $\frac{dy}{dt} = ky$ , with initial condition  $y = y_0$  when  $t = 0$ , has solutions of the form  $y = y_0 e^{kt}$ .

**TOPIC 7.9 Logistic Models with Differential Equations BC only**

**FUN-7 Solving differential equations allows us to determine functions and develop models.**

FUN-7.H Interpret the meaning of the logistic growth model in context. BC only

FUN-7.H.1 The model for logistic growth that arises from the statement “The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity” is  $\frac{dy}{dt} = ky(a - y)$ . BC only

FUN-7.H.2 The logistic differential equation and initial conditions can be interpreted without solving the differential equation. BC only

FUN-7.H.3 The limiting value (carrying capacity) of a logistic differential equation as the independent variable approaches infinity can be determined using the logistic growth model and initial conditions. BC only

	<p>FUN-7.H.4 The value of the dependent variable in a logistic differential equation at the point when it is changing fastest can be determined using the logistic growth model and initial conditions. BC only</p> <p>© 2013 The College Board, Advanced Placement</p> <p><a href="#">AP Frameworks</a></p>
